BRAND MANAGER

## Centralise and simplify email signature and form management.

Maintaining uniformity of email signatures and forms across a firm with many users can often be tedious work. Not to mention the time taken to set up email signatures for individual users.

With inMailX Brand Manager you can centralise the email signature and form creation process. Contact data is managed using Microsoft Active Directory; you have centralised control over the information contained in a signature or form. Multiple signatures for any given user may be created, and allocated user friendly names for easy identification.

inMailX Brand Manager will:

- ✓ Integrate Microsoft Outlook signatures and forms with Active Directory
- ✓ Use intelligent Outlook signature templates and forms
- ✓ Only display Optional Active Directory fields if they contain data
- ✓ Hide specific Active Directory fields per user
- ✓ Enable alias field replacement
- ✓ Support multiple Outlook email signatures
- ✓ Standardise and deploy corporate email forms and branding

Enforcing and maintaining firm wide standards on email forms and signatures is so much easier and more efficient using a centralised system such as inMailX Brand Manager.
